Guidelines for use of SJU computing facilities
April 12, 2000

Elegance is not optional. Richard O’Keefe

All students in Computer Science are required to follow faithfully these guidelines.

- Use ONLY Hollerith or Maxwell for programming assignments.
- All CGI scripts MUST be run on Hollerith. This is achieved by using the URL scheme:
  
  http://wwwmacs.sju.edu/cgi-bin/cgiwrap/loginname/relpath

  to name the method attribute of the form. Here loginname is your login name (no tilde), and relpath is the pathname of the script relative to your directory ~/pub_html/cgi-bin/
- If you create a server program you are responsible for ensuring that
  1. It is not a resource hog.
  2. It is shut down when not needed.
- Even today CPU time and storage are valuable resources. Don’t waste them.
- Document your programs.
- Both you and your programs should clean up after yourselves.
